

## Managed PBX Network (“Hosted Service”) DIAGRAM HOW IT WORKS

No system hardware or software to purchase. Phones are connected to the Hosted Service via Internet T1's from each office location. Remote locations such as home offices only require high-speed internet access. Find Me/Follow Me features give cell phones access to the network. Incoming and outgoing calls are routed through CMS Telecom's Managed PBX Network utilizing VoIP technology. Hosted phone service gives employees the flexibility to conduct business from anywhere – the main office, a branch, their home office or on the road using the same phone number.
