

CMS Telecom is the expert in optimizing your telecommunications.

Whether your needs call for an incremental program introducing IP telephony advantages or a complete replacement of your existing system with a totally converged IP solution, we can provide the expertise and advice you need.

CMS Telecom has a successful history in telecommunications and our team is renowned for its technical and service support.

Partnerships

We are partnered with the top manufacturers and providers of VoIP and PBX service, allowing us to bring you unbiased, effective and cost efficient best-of-breed business solutions.

Why choose VoIP for your business?

A Voice Over Internet Protocol (VoIP) Solution will provide you with a range of benefits and cost-efficiencies. VoIP offers flexible converged communications solutions that will increase your operational efficiency, reliability and security.

Some of the benefits of VoIP include:

- Elimination of many domestic toll charges and savings on international calls
- A measurable Return On Investment (ROI) due to the reduced cost in network management, equipment and maintenance
- A converged voice and data system that is highly scalable to grow with your business
- Access to a range of advanced multi-media features, including call logs, personal and corporate address directories, speed dial, video and conferencing capabilities
- Improvement in the efficiency and cost of inter-office communications
- A system compatible with the broadest array of network, access, and back-office equipment

What is VoIP?

Voice Over Internet Protocol allows you to make and receive phone calls over your high-speed internet.

How good is the quality?

In most cases, the quality meets or exceeds acceptable voice quality levels of traditional phone service.

Are there per minute costs?

VoIP can eliminate many domestic toll charges and reduce the costs of calling internationally. If your business has multiple locations, inter-office toll charges can be eliminated. With a "hosted plan" each caller can enjoy unlimited usage for one low, monthly cost. Hosted plans also offer significantly reduced international rates.

Can I still use my computer if I am on the phone?

Absolutely. VoIP phone usage does not affect your computer usage. You can still send and receive emails and surf the web with no interruption.

If I switch to VoIP, can I keep my existing phone number?

The answer is usually yes. Most VoIP service providers allow you to keep the same number upon receiving a signed letter of authorization.

Products and services

We can offer you a range of software applications and proven hardware in areas of voice and data. We also offer cabling services and security systems, including CCTV.

Our maintenance and support includes:

- 24/7 Technical Service and On-Call Support
- Voice & Data Maintenance and Service Contracts
- Remote Diagnostics and Support
- Manufacturers' Warranties Honored
- MACs – Moves, Adds and Changes

Special financing

We can offer you a properly tailored lease program which will give you the benefit of obtaining the equipment you need with cash-flow advantages and limited capital investment.

Advantages of leasing:

- Helps preserve operating capital against equipment obsolescence
- Minimizes demands on cash flow

Get started with CMS Telecom

Let our experienced professional staff show you how to upgrade your system and save money at the same time...

Simply fax or email your phone bill to us, and our staff will review your current expenses and help identify where savings can be realized. We can also arrange for a consultant to visit you, at no expense, to perform a complete analysis of your current communication expenses, systems infrastructure and organizational needs.
